|--|----|
| Introduction | i |
| 1 Optical imaging | 1 |
| 1.1 Light in a Vacuum | 1 |
| 1.2 The law of refraction | 2 |
| 1.3 Refractive index and dispersion | 4 |
| 1.4 Optical glasses | 5 |
| 1.5 Ray-tracing a lens | 7 |
| 1.6 The image equation | 10 |
| 1.7 Lens aberrations | 12 |
| 1.7.1 Longitudinal chromatic aberration | 13 |
| 1.7.2 Spherical aberration | 13 |
| 1.7.3 Field curvature | 14 |
| 1.7.4 Astigmatism | 16 |
| 1.7.5 Coma | 16 |
| 1.7.6 Lateral chromatic aberration | 18 |
| 1.8 Optical design | 19 |
| 2 The telescope | 21 |
| 2.1 The telescope of Keplerian design | 21 |
| 2.1.1 Functional principles | 21 |
| 2.1.2 Focal ratio | 22 |
| 2.1.3 Magnification | 23 |
| 2.1.4 Angle of field and field of view (FOV) | 23 |
| 2.1.5 Distortion | 24 |
| 2.2 Telescope of Galilean design | 26 |
| 2.3 Virtual image and depth of field (DOF) | 27 |
| 2.4 Wave optics | 29 |
| 2.4.1 Huygens' principle | 29 |
| 2.4.2 Diffraction-limited resolution | 30 |
| 2.4.3 Anti-reflective coatings | 31 |
| 3 Image erecting prisms | 33 |
| 3.1 Porro-type systems | 33 |
| 3.1.1 Total internal reflection (TIR) | 33 |
| 3.1.2 Porro I system | 34 |

| | | |
|----------|--|-----------|
| 3.1.3 | Porro II system | 36 |
| 3.1.4 | Perger prism (A contribution by Dr Andreas Perger) | 38 |
| 3.2 | Roof prisms | 39 |
| 3.2.1 | Schmidt-Pechan prism | 40 |
| 3.2.2 | Abbe-König prism | 42 |
| 3.2.3 | Uppendahl prism | 43 |
| 3.2.4 | Mirror-prism combinations | 44 |
| 3.2.5 | Reflective coatings | 46 |
| 3.2.6 | Phase-shift and its correction | 47 |
| 4 | The anatomy of binoculars | 51 |
| 4.1 | Objective lenses | 51 |
| 4.1.1 | The achromatic objective | 51 |
| 4.1.2 | ED objectives | 52 |
| 4.1.3 | Apochromatic objectives | 53 |
| 4.2 | Eyepieces | 55 |
| 4.2.1 | Simple eyepieces for narrow fields of view | 55 |
| 4.2.2 | Wide-angle eyepieces | 56 |
| 4.3 | Focus mechanisms | 58 |
| 4.3.1 | Three different approaches | 59 |
| 4.3.2 | Observations at close range | 61 |
| 4.4 | Dimensions of the ray-bundle | 63 |
| 4.4.1 | Reduced path | 63 |
| 4.4.2 | Dimensions of the intermediate image | 64 |
| 4.4.3 | Prism entrance face width | 65 |
| 4.5 | Examples | 66 |
| 4.5.1 | 8x42 and 10x42 binocular | 66 |
| 4.5.2 | 8x30 and 6x30 wide-angle | 67 |
| 4.5.3 | 7x50 (super-) wide-angle | 68 |
| 4.6 | Aperture and field stop | 69 |
| 4.7 | Image stabilisation techniques | 71 |
| 4.8 | Sealing and purging of binoculars | 73 |
| 5 | Report on a self-made high-performance binocular (by Gerhard Eller) | 77 |
| 6 | The eye | 83 |
| 6.1 | The eye as an optical instrument | 83 |
| 6.2 | The field of vision | 84 |
| 6.3 | The pupil width | 84 |
| 6.4 | The accommodation width | 86 |
| 6.5 | Aberrations of the eye | 87 |
| 6.6 | The retinal photoreceptors | 89 |

| | | |
|----------|---|------------|
| 6.7 | Day and night vision | 90 |
| 6.8 | Twilight vision: the Stiles-Crawford effect | 92 |
| 6.9 | Retinal data processing | 93 |
| 7 | The visual perception | 97 |
| 7.1 | Laws of visual perception | 97 |
| 7.1.1 | The laws of Ricco, Piper and Weber-Fechner | 98 |
| 7.1.2 | Berek's model of target detection | 100 |
| 7.2 | The perception of colour | 103 |
| 7.3 | Stereoscopic depth perception | 104 |
| 7.3.1 | Further mechanisms of depth perception | 106 |
| 7.4 | Saccadic image construction | 107 |
| 7.5 | The optical flow | 108 |
| 7.6 | The visual distortion | 109 |
| 8 | Eye and binocular: the man-machine | 113 |
| 8.1 | Luminous flux and magnification | 113 |
| 8.2 | Performance: resolution | 116 |
| 8.3 | Performance: handheld vs. mounted | 118 |
| 8.4 | Performance: target sighting | 119 |
| 8.5 | Which approach to binocular performance is most relevant? | 122 |
| 8.6 | Night sky performance | 123 |
| 8.6.1 | Stellar magnitudes | 123 |
| 8.6.2 | Astro-indices for limiting magnitudes | 124 |
| 8.6.3 | Limiting magnitudes in Berek's model | 125 |
| 8.6.4 | Comparison with observation data | 126 |
| 8.7 | Atmospheric scatter and seeing | 128 |
| 8.8 | Visual transmission, colour contrast and saturation | 131 |
| 8.9 | Depth of field | 133 |
| 8.10 | Depth resolution and cardboard effect | 135 |
| 8.11 | Distortion and globe effect | 137 |
| 8.12 | The search for the ideal distortion curve | 139 |
| 8.13 | Observation with spectacles | 142 |
| 9 | Binocular evaluation and field testing | 145 |
| 9.1 | Laboratory tests | 145 |
| 9.2 | A quick test in- and outside the store | 148 |
| 9.2.1 | First impression: design, ergonomics, haptics | 148 |
| 9.2.2 | Checking for additional rejection criteria | 149 |
| 9.2.3 | Evaluating optical performance | 151 |
| 9.3 | Field tests | 153 |
| 9.3.1 | Resistance against stray-light | 154 |

| | | |
|-------|---|-----|
| 9.3.2 | Ghost images | 156 |
| 9.3.3 | Off-centre sharpness | 159 |
| 9.3.4 | Low-light performance | 160 |
| 9.3.5 | Chromatic aberration | 161 |
| 9.3.6 | Ease of view: the unspeakable | 162 |
| 9.3.7 | Ergonomics and haptics | 164 |
